Revision No. 0

1	B-4 TRAFFIC INFORMATION [6 CCR 1007-3 § 100.41(a)(10)]
2	
3	The PCAPP EDS site will have three separate transportation routes. Two internal, Chemical Limited
4	Area (CLA) (G-Block) transportation routes: One to move items to be destroyed from the PCD
5	RCRA-permitted storage igloos (as outlined in 2013 PCD RCRA Permit Renewal Application) to the
6	PCAPP EDS site CSU (H1102). The other internal CLA route will be used to move items from EDS
7	CSU (H1102) to the PCAPP EDS Environmental Enclosure (see Figure B-4-1 ¹). This road is controlled
8	via CLA (G-Block) gate entry and is not accessible to the public. The external route will be used to move
9	waste, equipment, and supplies between the PCAPP EDS site and the PCD northern entrance (see
10	Figure B-4-2). External access roads to PCD are discussed in the PCD RCRA Permit Renewal
11	Application.
12	
13	Items to be processed at the PCAPP EDS site will be transported from the PCD RCRA-permitted storage
14	igloos in enclosed trucks or trailers such as Modified Ammunition Vans. Storage delivery is expected to
15	occur approximately once per week during operations. Personal vehicles will be parked outside the
16	PCAPP EDS site fence lines, and therefore, will not affect traffic within the operational site.
17	
18	In general, roads that will be used to transport hazardous wastes to and from the PCAPP EDS site will be
19	gravel-lined or paved and capable of highway loading, HS-20 loading: 18,000-pound maximum axle
20	load; 32,000-pound maximum axle group; and 72,000-pound maximum vehicle weight (rating per
21	American Association of State Highway and Transportation Officials).
22	
23	Items will be brought to the Environmental Enclosure using material handling equipment such as forklift,
24	truck, or other appropriate vehicle to the PCAPP EDS Environmental Enclosure for treatment in an EDS
25	unit.
